(A Little Bite of Geometry for Your Day)

Angles Getting Oppositional

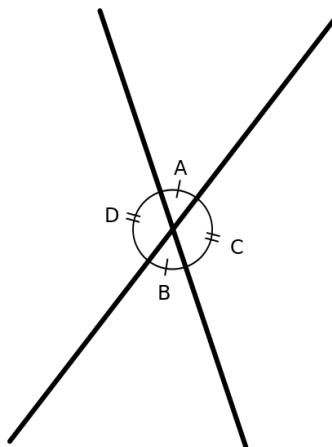

Complementary Angles are angles that, added together, make up a 90° angle. The sum of their measures is 90.

Supplementary Angles are angles that, added together, make up a 180° angle. The sum of their measures is 180.

Vertical Angles, or Vertically Opposite Angles, are angles that are formed by two intersecting lines or line segments. They have equal measures.

Ex: Find the values of x , y , z , w and k , given that lines l_1 and l_2 are perpendicular:
